Web Developer & Automation Support

Remote, project-based | [Website](#) | [Portfolio](#) | [GitHub](#) | dynascapes@gmail.com

Professional Summary

Web developer focused on practical small-business sites, frontend cleanup, forms, dashboards, API workflow support, documentation, and launch QA. Best fit: scoped paid trials, bug fixes, small builds, and async work with clear requirements and payment terms.

Core Skills

Frontend: HTML, CSS, JavaScript, responsive layouts, static sites, GitHub Pages.

Web app/API support: React-style component work, UI cleanup, forms, dashboards, Node.js workflow support, API planning.

Delivery: QA checklists, deployment checks, readable docs, milestone notes, launch fixes, handoff summaries.

Business web: Service pages, pricing/contact sections, policy pages, Stripe-ready payment copy.

Project Experience

Shadow AI Studio service site

Built a responsive public service site with service packages, contact flow, policy pages, and Stripe-ready payment language.

Portfolio page

Created a client-shareable portfolio page with selected work, service capabilities, boundaries, and direct project links.

Launch audit and fix workflow

Created a repeatable workflow to find launch blockers, group issues by severity, fix high-impact problems, and leave plain handoff notes.

Automation workflow planning

Maps repetitive admin/content tasks into documented steps, implementation notes, error handling, and simple QA checks.

Good Fit / Boundaries

Good fit: Small web fixes, landing pages, GitHub Pages deploys, dashboard cleanup, forms/contact flows, docs, API/integration planning, scoped automation workflows, paid trial tasks.

Not a fit: Account farming, fake engagement, KYC/identity work, private credential handling, risky downloads, or unpaid tests that produce usable client deliverables.
